**Predictive Services Discussion:** Temperatures across the Pacific Northwest and Northern California will begin to cool, as an unseasonably strong upper level trough begins to dip south from British Columbia. Along the base of the system, breezy winds are possible across Northern California and Nevada. Further south, southwesterly on-shore flow will keep temperatures near normal across Southern California. Inland, scattered wet monsoonal convection will continue across the Four Corners, as a breezy westerly flow continues across the Northern Rockies and the northern Great Plains. Across the East, near average conditions are expected due to the presence of a weak but broad trough over the Ohio River Valley and the Northeast. Across the South, the strong high pressure ridge over Texas will drift east, keeping conditions hot and humid. Isolated storms are expected across the Deep South in the afternoon.

## SAFECOMs

*Aviation Category*

### What the SAFECOM system IS

The Aviation Safety Communiqué (SAFECOM) [AMD-34/FS-5700-14](#) should be used to report any condition, observation, act, maintenance problem, or circumstance with personnel or the aircraft that has the potential to cause an aviation-related mishap. SAFECOMs are a tool used to identify, document, track, and correct safety related issues.

### What the SAFECOM system IS NOT

- NOT intended for initiating punitive actions,
- NOT to be used as a complaint system or for personal attacks,
- NOT used by contracting officers for contract evaluations/award purposes,
- NOT a substitute for "on-the-spot" corrections to a safety concern, and
- Does NOT replace the requirement for initiating an accident or incident report.

**SAFECOMs provide the necessary feedback for development of the following communication tools:**

- *Accident Prevention Bulletins*
- *Lessons Learned*
- *Safety Alerts*
- *Technical Bulletins*
- *Airwards*
- *Information sharing Memos*
- *Maintenance deficiencies (ADs, SBs, etc)*
- *Safety trends*
- *Training needs*
